

Case Study

RS115 | Frederiksberg

Project: Seasonal Lighting, Frederiksberg, Copenhagen, Denmark
Product: RS115df sockets

RS115 | Frederiksberg...

Frederiksberg Runddel at the main entrance to Frederiksberg Gardens in Copenhagen is the location for an outdoor ice rink every winter. Skating is free and a very popular activity for local families and tourists. During short mid-winter days, extra lighting is required for safe skating and in 2018 Frederiksberg Kommune and Citelum installed two RS115 sockets connected by underground cable ducting to a power supply cabinet. Floodlight poles can now be installed and connected in minutes and removed in a similar timeframe. IPL group's RETENTION SYSTEM™ sockets are installed flush with the ground level so they blend in unobtrusively with the existing paved surface and when the lighting poles are removed, the area is left safe for pedestrians.

Further information on the RETENTION SYSTEM sockets for post installation is available at www.retention-system.com. Measurements and weights are approximate. The designs are the property of Innovative Products Ltd (IPL group) and may not be reproduced without express permission. Innovative Products reserve the right to amend specifications or to withdraw models without prior notice. © April 2019.
