

Case Study

RSe406 | London

Project: Cantilever Traffic Signals, London, England
Product: RSe406 sockets

RSe406df | London...

RETENTION SYSTEM™ sockets provide a maintenance free foundation system where no further excavation and reduced expense and disruption is required on the up keep and repair of essential infrastructure.

In locations around London, RSe406 sockets have been used for the installation of large cantilever traffic signals. These cantilever posts feature a Ø406mm base and mast arms projections up to 8.5m that can be rotated by mechanical means. This allows maintenance work to be carried out in safety away from the road way and further ensures reduced traffic management, minimal disruption and lower maintenance costs.

Further information on the RETENTION SYSTEM sockets for post installation is available at www.retention-system.com
