

# Case Study RS115 | Geashill

**Project:** Traffic Signal Posts, Geashill, County Offaly, Ireland  
**Product:** RS115df sockets

## RS115 | Geashill...

The design features of RETENTION SYSTEM™ socket foundations offer installation and maintenance benefits which include easy replacement of damaged posts without expensive and disruptive traffic management, ground works or excavations. During the installation process, another major benefit is the separation of civil and electrical works. This keeps the number of people required on site to a minimum. At the cross roads in Geashill, the RS115 socket foundations were first completed, at a later date the posts were installed and cables pulled through and the site left ready for final electrical connection of the signal heads.

Further information on the RETENTION SYSTEM sockets for post installation is available at [www.retention-system.com](http://www.retention-system.com). Measurements and weights are approximate.
