

Case Study

RS115 | Lostwithiel

Project: Lostwithiel, Cornwall, England
Product: RS115 sockets

RS115 | Lostwithiel...

IPL group's intelligent foundation solutions simplify installation practices and assist asset owners and operators across a range of demanding management and maintenance jobs. Network Rail used RS115 sockets for the installation and upgrade of level crossing barriers and warning signs at the Lostwithiel level crossing in Cornwall. During the project, all groundwork was completed prior to the removal of the old warning signs. This meant track closures and delays were minimised and disruption to both road and rail users avoided. IPL group's RETENTION SYSTEM™ socket foundations also ensure that this essential infrastructure can be removed and replaced quickly and easily in the event of vehicle damage.

Further information on the RETENTION SYSTEM sockets for post installation is available at www.retention-system.com. Measurements and weights are approximate. The designs are the property of Innovative Products Ltd (IPL group) and may not be reproduced without express permission.
