

Case Study

RS115 | Piccadilly

Project: Traffic Signals, Piccadilly, London, England
Product: RS115df sockets

RS115 | Piccadilly...

RETENTION SYSTEM™ foundations are a common feature in traffic signal installations throughout London including high-profile locations such as outside the famous Ritz hotel on Piccadilly. RS sockets provide a maintenance free foundation system where no further excavation and reduced expense and disruption is required on the upkeep and repair of essential infrastructure. For TfL (Transport for London), the RS115df socket plays a critical role in the speed and ease of post maintenance and sees more traffic signals operational more of the time.

Further information on the RETENTION SYSTEM sockets for post installation is available at www.retention-system.com. Measurements and weights are approximate.
