

Case Study

RS115 | Piccadilly Circus

Project: Traffic Signals, Piccadilly Circus, London, England

Product: RS115df sockets

RS115 | Piccadilly Circus...

RS115df sockets are a critical feature in the foundation of traffic signals in London's vibrant Piccadilly Circus. While upgrading the city's roads, pavements and infrastructure, TfL (Transport for London) incorporated RETENTION SYSTEM™ sockets into the foundation and installation of traffic signals to ensure a quick and reliable maintenance programme. By using RS115 sockets, any damaged posts in this highly-trafficked area are easily replaced without excavation and with minimum disruption to the public.

Further information on the RETENTION SYSTEM sockets for post installation is available at www.retention-system.com. Measurements and weights are approximate. The designs are the property of Innovative Products Ltd (IPL group) and may not be reproduced without express permission.
