

Case Study

RS mobile plinth | London Games 2012

Project: London 2012 Olympic Information Signage, London, England

Product: RS mobile plinths

RS mobile plinth | London Games 2012...

RS mobile plinths are used regularly by TfL (Transport for London) for the temporary installation of CCTV and traffic signals during maintenance and upgrades of Central London's road network. As part of the London 2012 Olympic games, RS mobile plinths provided temporary foundations for traffic management information signs on all major roads throughout the city. After the games the temporary sign installations were removed. All RETENTION SYSTEM™ mobile plinths have cast-in RS sockets with electrical cable access, forklift slots and lifting hooks for easy on-site mobility and safe off-site storage.

Further information on the RETENTION SYSTEM sockets for post installation is available at www.retention-system.com. Measurements and weights are approximate. The designs are the property of Innovative Products Ltd (IPL group) and may not be reproduced without express permission. Innovative Products reserve the right to amend specifications or to withdraw models without prior notice. © September 2012.
